

PROJECT REPORT ONZE LIEVE VROUWENHUIS BY SCAFOM - RUX

SCALOK

ONZE LIEVE VROUWENHUIS

OOSTERHOUT - THE NETHERLANDS

ABOUT P&S BV

Project & Scaffolding BV is a Dutch scaffolder based in Rotterdam. Director Wahab Aljilawie and his team are offering the purchase and sale, rental and assembly as well as dismantling of scaffolds and scaffolding material. Project & Scaffolding BV and Scafom-rux have joined forces for several projects in recent years.

For more information about Project & Scaffolding BV call +31 111 407 015 or send a mail to info@project-scaffolding.nl

PROJECT QUICK FACTS:

- Project: restoration of the façade and roof of a historic building with little storage capacity, solved through multiple deliveries that were well matched to the scaffolder's build rate
- Scaffolder: Project & Scaffolding BV
- Duration: 25 weeks
- Scaffold type: SCALOK, 80 tons

SCAFFOLDING CHALLENGE

80 TONS OF MATERIAL, BUT LITTLE STORAGE CAPACITY

Construction work at historic buildings often requires unconventional solutions. And so, the renovation of the façade and roof of the 100-year-old nunnery Onze lieve vrouwenhuis in Oosterhout, too, presented Project & Scaffolding BV with a real challenge. A new entrance to the church, an annexe and more energy-efficient equipment are planned to make the building more fitting to the needs of the parish.

To make this happen, 80 tons of Scalok material was needed. No problem up to this point – but where to store three truckloads of material when storing capacity is a scarce good? To make things even more complicated, the building itself is not only relatively small, making storing difficult, but the new gothic abbey building also required the most careful unloading and handling of material.

SCAFFOLDING SOLUTION

MULTIPLE DELIVERIES, BASED ON THE ASSEMBLY SPEED

The scaffolders from Project & Scaffolding BV did not have to think twice and brought Scafom-rux on board. Quickly, a plan was set up together: Why not simply bring the material to the building site in several deliveries that are based on the assembly speed of the scaffolders? No sooner said than done and Scafom-rux delivered the right parts just at the right time so that the scaffold could be assembled quickly and safely by the workers.

Because the small space given at the construction site was not overfilled with scaffolding material, the extremely careful unloading that was necessary to meet the preservation requirements was made possible.

RESULTS

The renovation of the building is now in full progress. The Scalok scaffold was quickly erected at the abbey and valuable time and money was saved thanks to fast processes:

- from quote to delivery in only 2 weeks
- factory in Belgium delivered the material immediately after the assignment was placed
- deliveries to the project site on time

This way, the construction work can now proceed quickly and the eagerly awaited new annexe and the new entrance to the church are taking shape.

OUTLOOK

The Scalok scaffolding will be at the abbey in Oosterhout until October this year. The project is expected to be completed on time thanks to the

- individual scaffolding solution
- adjusted delivery intervals
- high quality and safety standards of the scaffold

Project & Scaffolding BV appreciated the price, quality and delivery reliability and already ordered further 198 tons of Scafom-rux' material for other projects.

ABOUT SCAFOM-RUX

SMART DETAILS, GREAT SOLUTIONS

Scafom-rux is an innovative producer and rental supplier of high-quality scaffolding, shoring and formwork solutions, with five strategically located production sites all over the world and a global presence in over 15 countries on 4 continents. Founded in 1978 by Frans Brinkmann, the family-owned company has its roots and its headquarters in the Netherlands.

Smart solutions are our core business. If you are planning a challenging project or want to learn more about Scafom-rux' products and services, please contact us via email (team.benelux@scafom-rux.com phone: +31 88 730 7202). Our team will be happy to work with you. For further information about Scafom-rux and our entire solution portfolio, take a look at www.scafom-rux.com.

STRONGER. TOGETHER.

SCALOK FACTS

Scalok combines a traditional tube coupler with flexibility and innovative design, making it a suitable system for every type of project. More facts about Scalok include:

- Convenient quick lock.
- Cost-saving because of the quick and easy assembly and disassembly.
- Class 4 facade scaffold, but with the right modifications, class 5 and class 6 scaffolding can also be realised.
- 100% interchangeable with comparable systems.
