

MOBILO

Mobile Scaffolds

A safe work place

A safe workplace has always been a basic need for everyone. However, the MOBILo product group has led to a completely new definition of the term "safe workplace". After all, thousands of craftsmen stand on Scafom-rux MOBILo mobile scaffolds doing their jobs every day, with the security of knowing their workplace is safe even at great heights.

Using a Scafom-rux MOBILo scaffold means mobility, speed and flexibility. Such qualities in your working equipment are becoming more and

more vital in times of keen competition. You can't rely on obsolete and inefficient equipment to ensure the success of a building project. Improvised solutions take time, and time is money, especially where skilled craftsmen and specialists have to solve the problem of reaching their workplace and making it safe before they can start work.

System efficiency is the keyword, since the Scafom-rux MOBILo product group is a logical continuation of the system idea which you will find in all Scafom-rux product lines.

Once you have tried it, you will be a MOBILo fan

Various models

And one system!

Each MOBILO model has its own system, but the whole product group is also logical system in its own. A system characterized by substantial user benefits in every respect. Exploring the Scafom-rux MOBILO product family leaves ample scope for creativity. Just replace the term “mobile scaffold” by “problem solving”. Scaffolds are our company’s core competence. Consequently, we have always had the focus on our customers and their needs in developing the Scafom-rux MOBILO systems as well. This means, the compatibility between different Scafom-rux product groups is a substantial advantage for users. Thanks to an extensive range of accessories that can be combined with the basic elements of Scafom-rux MOBILO scaffolding, you will often have a chance to produce a low-cost alternative to scaffold a building.

- Only few basic elements that can be used with all MOBILO models, thus making this product group a truly modular system
- Light, easy-to-handle components for user-friendly, ergonomic assembly
- Predominantly slip-on connections for quick assembly

- All elements are optimized for efficient transport and space-saving storage
- Every scaffold model complies with the relevant national and European technical regulations

- All MOBILO models can also be used as basic elements for many special structures, such as suspended scaffolds, large ceiling scaffolds or stair towers.

This is what everybody wants: the fastest way to the top!

Speed is an important consideration on the way up. The faster a building site is set up or more precisely, the faster a scaffold is erected, the sooner work can be started, and the faster money can be earned. So don't waste your human resources on work that doesn't generate any revenue or generates revenue only under certain conditions. Value performance for building contractors only begins when craftsmen and specialists can actually start to work on their jobs.

The Scafom-rux MOBILLO system has been designed with this thought in mind. It has been developed in such a way that every mobile scaffold model can be assembled to reach its full height within a minimum of time. Stable slip-on connections, no time-consuming screwing, self-locking fastening devices for ledgers and diagonals, decking made of plywood or aluminium, and base units with height-adjustable castors, are all designed to promote fast and safe assembly.

Innovative leadership of an industry: this is our commitment!

We invest in developing new scaffolding elements and optimized solutions every year. We owe this to our faithful customers.

This continuous process can only be successful through close partnership with our customers. Many suggestions from our customer base have already led to genuine innovative products which were eventually mass-produced.

There are good reasons for innovation:

- The cost-efficiency potential of any system is never completely exploited. Here, the focus is primarily on the product design of existing elements.
- New technologies promote improvements in manufacturing techniques and the use of new materials, as well as the implementation of sophisticated ideas.

Our product range and total commitment are aimed at providing you with a significant competitive edge in the future as well.

MOBILO 800

The classic among mobile scaffolds

Scafom-rux MOBILO 800 covers the majority of applications for mobile scaffolds.

	Indoors	Outdoors
Working Height	4-14	4-10
Scaffold Height	3-13	3-9
Platform Height	2-12	2-8

Ranges from - to in steps of 2 metres.

A maximum working height of 14 metres with a 2.60 m x 0.80 m working platform is generally sufficient to meet the needs of most users. Therefore MOBILO 800 is the classic among mobile scaffolds. Here also, the motto is: „safety with a logical system“, which includes a GS certificate from RW-TÜV. After all, we are offering ultimate top-level workplace safety.

Similar to all other members of the MOBILO family, Scafom-rux MOBILO 800 is characterized by some special technical features that combine efficiency with safety.

A clear, reliable concept!

- Few individual components, easy to handle, for cost-efficient one-man assembly and ideally designed for transport and storage
- Low capital investment thanks to utilisation of all technical possibilities, such as providing access via slip-on ladders
- Special castors locking in centre position to provide maximum load capacity

MOBILO 1400

For a bit more performance?

All the advantages of Scafom-rux MOBILLO 800 - and more. This is how the MOBILLO 1400 mobile scaffold could be described. Its generously dimensioned working platform measuring 2.60 m x 1.40 m provides ample space for workers, materials and tools.

	Indoors	Outdoors
Working Height	4-14	4-10
Scaffold Height	3-13	3-9
Platform Height	2-12	2-8

Ranges from - to in steps of 2 metres.

Less is more! This also applies to MOBILO 1400.

Few individual components for more efficiency in assembly, transport and storage. The few steps required to assemble the scaffold ensure greater speed. More scaffolding in return for only a small additional investment, since MOBILO 1400 is a compatible modular system based on the essential elements of MOBILO 800.

The advantage is obvious: whoever starts off with MOBILO 800 and then wishes to invest in the larger model MOBILO 1400 later on does not have to purchase an entirely new mobile scaffold, but only the additional elements that he really needs.

Diagonals, rails and working platforms are identical for both scaffold models, which means a significant cut in the required capital investment.

Production in the rhythm of time - just in time, and designed to fit

Ultra-modern manufacturing equipment ensures proven, superior Scafom-rux product quality is sustainable.

Scafom-rux operates its own production facilities. It also employs numerous small and medium-sized manufacturing partners, ensuring On-Time delivery of the complete product range.

In addition to process control and quality assurance, the main focus of Scafom-rux targets flexible production scheduling that reliably meets all customers' demands.

Individual and customised or mini-series projects are expeditiously slotted into place in this organisational structure.

Scafom-rux responds to special requirements at short notice and with top-quality products at any time, promoting a loyal customer base.

Advantages of a global network

Scafom-rux is a global leader of scaffolding, shoring and formwork systems.

Thanks to the true international coverage of the Scafom-rux network, the company has a significant presence in key construction and production markets. These include Germany, China, Canada and the United States, plus contacts in important centres of Africa and the Middle East.

Scafom-rux has a good understanding of construction trends. The company's business partners value Scafom-rux leadership strengths. Scafom-rux values the insight of its partners.

Partnership & Mutual Reward, it's a matter of trust and mutual belief!

More details

Key Information Included in Scafom-rux Pricelists

The benefits of Scafom-rux systems are convincing. However, even more comprehensive information is readily and easily available from the professionals at the Scafom-rux Technical Department. Simply make a telephone call or send an email. Scafom-rux has plenty of information designed to make many construction tasks easier and more profitable.

It is important to note, for example, that load tables, sample configurations, detailed technical data and other useful tips are contained in Scafom-rux product price lists. Much of the vital information required for customers to “rise to the great heights” of achievement is available in Scafom-rux product price lists.

True partnership is much talked about but it can neither be demanded or bought. It must be built, block by building block. Together with loyal customers, Scafom-rux has already built a clear competitive edge.

Value of a Partnership

When is a team partnership something special... when is it a “big player” or when, regardless of size, it makes a commitment to work together using the principles of best practice? The Scafom-rux belief is simple: a partnership team becomes “special” when Scafom-rux is accepted as an integral part of the customer structure. This is not just a target but a motivation for all at Scafom-rux.

We are motivated, let's get moving!
